Profile Summary

Motivated Electronics and Communication Engineering graduate with a Diploma and B.Tech background. Possess hands-on experience in core electronics and a strong interest in core engineeringroles.Seekinganentry-levelpositiontoapplytechnicalknowledgeandcontinue learning.

Technical Skills

- **Programming Languages:** C, Java, Python(Basics)
- **Frameworks & Libraries:** Pandas, NumPy, Seaborn, Matplotlib
- **Concepts:** Data Structures and Algorithms(DSA),Object- Oriented Programming(OOP)
- **Electronics Knowledge:** Microprocessors& Microcontrollers programming, Vivado tool, DSCH tool, Verilog HDl

Projects

1. Advanced Survilleance Robot (Aurdino)

- **Role:** Team Member(Group Project–8Members)
- Worked as a team member in an 8-member group on the Advanced Surveillance Robot project .I was responsible for preparing the project report and Power Point presentation, explaining the system concept, working principle, and application of mobile-controlled surveillance.
- **Outcome :**The project resulted in a mobile surveillance robot that can be operated using a mobile phone, overcoming the limitation of fixed CCTV systems. The robot enables flexible monitoring by moving to different locations, improving surveillance coverage and usability.

2. Automatic External Defibrillator(AED)

Role : R&D Intern–Power Electronics(Biomedical Devices)

- Worked on testing and validation offly back transformers and MOSFETs to achieve a 1 kV high-voltage output for an Automatic External Defibrillator (AED). Performed soldering, circuit testing, and component-level experimentation as part of the power supply development during the internship.
- **Outcome:** Supported reliable 1kV high-voltage generation for an AED throughfly back transformer testing and validation.

3. Text-to-Speech Announcement System

Role : Speaker Integration &Hardware Support

- Worked on the implementation and documentation of a Text-to-Speech–based announcement system. Contributed to designing the system flow and explaining how text input from authorities is converted into speech and transmitted to classroom speakers through Bluetooth and wired connections.
- **Outcome:** Enabled clear and real-time audio announcements across classrooms through reliable speaker connectivity.

4. 4×4 Round Robin Arbiter (RRB)

Role : RTL Design & Verilog Implementation

- Worked on the design and implementation of a 4×4 Round Robin Arbiter using Verilog HDL. Contributed to RTL coding, functional simulation, and verification of the arbiter to ensure fair and sequential allocation of resources among multiple requesters.
- Used Vivado Design Suite for coding, simulation, and waveform analysis.
- Applied knowledge of Digital Electronics and VLSI Design concepts during project development.
- **Outcome:** Successfully designed and simulated a Round Robin Arbiter that provides efficient and starvation-free arbitration by granting access to each requester in a cyclic order.

Education

B.Tech. in Electronics and communication Engineering (Diet college,Anakapalli)
Pursuing 4th year (CGPA:9.06)

Government Polytechnic , Anakapalli | Anakapalli,Andhrapradesh|May2024(86%)

Gloria Vidhya kendram, Kurmannapalem **GPA/Percentage:** 9.8/10.0 (100%)

Internship Experience

1.R&D Hardware Intern| AMTZ (Andhra Pradesh Med Tech Zone)|Dec 2023 – May 2024

- Worked in the R&D department on biomedical hardware projects, focusing on soldering electronic components and PCB boards.
- Tested component values and performed functional testing of dialysis machine pumps and related hardware modules.
- Involved in hardware testing and board-level validation for syringe pumps and other biomedical devices.
- Gained hands-on experience with medical device hardware through testing, troubleshooting, and assembly support activities.

2. VLSI Design Trainee | HMI Engineering Services | MAY- 2026

- Completed training in Digital Electronics and Verilog HDL fundamentals.
- Gained hands-on experience with Vivado Design Suite for design entry, simulation, and verification.
- Worked with DSCH Tool for digital circuit design and logic implementation.
- Developed and simulated a 4×4 Round Robin Arbiter using Verilog HDL.
- Performed RTL coding, functional simulation, and waveform analysis for digital designs.
- Acquired practical knowledge of VLSI design flow, combinational and sequential circuits.

Certifications & Skills

- **Certification:** Celonis academy, Google AL-ML, Microsoft Embeeded Systems, Python full stack developer-issued edu skills virtual internship.
- **Soft Skills:** Communication, Adaptability, Teamwork, Confidence, Responsibility.
- **Hobbies:** Videography, editing, dance, sports, Listening music.
